Les immenses progrès, enregistrés lors des deux dernières décennies, dans le diagnostic et le traitement des maladies hémorragiques ou thrombosantes, ont considérablement modifié la prise en charge des patients qui est de mieux en mieux codifiée (médecine fondée sur les preuves).

L'ouvrage s'ouvre sur les rappels de physiopathologie et de la sémiologie clinique et biologique actuelle de l'hémostase.

La première partie aborde les maladies hémorragiques constitutionnelles ou acquises et les moyens thérapeutiques disponibles pour chacune.

La deuxième partie a trait à toutes les maladies thrombosantes à travers le rappel des mécanismes physiopathologiques et des facteurs de risques. Les maladies thromboemboliques veineuses ou artérielles et leurs traitements médicamenteux sont détaillés.

Enfin, la troisième partie, originale, présente les conduites pratiques dans des situations particulières : cardiologie, gériatrie, auto-immunité, pédiatrie, etc.

Tous les chapitres de cette 2e édition ont été mis à jour selon les dernières données de la littérature, notamment les recommandations 2008 des Sociétés savantes et les bibliographies actualisées par des références récentes.

Une attention particulière a été portée aux traitements médicamenteux incluant les tout nouveaux agents antithrombotiques.

Un abrégé complet sur les pathologies hémorragiques et thrombosantes dont tous les spécialistes doivent avoir connaissance.
