Attribution Theory: Applications to Achievement, Mental Health, and Interpersonal Conflict (Communication)

This unusual volume begins with a historical overview of the growth of attribution theory, setting the stage for the three broad domains of application that are addressed in the remainder of the book. These include applications to: achievement strivings in the classroom and the sports domain; issues of mental health such as analyses of stress and coping and interpretations of psychotherapy; and personal and business conflict such as buyer- seller disagreement, marital discord, dissension in the workplace, and international strife.

Because the chapters in *Attribution Theory* are more research-based than practice- oriented, this book will be of great interest and value to an audience of applied psychologists.
