Geometry of Complex Numbers (Dover Books on Mathematics) Hans Schwerdtfeger

"This book should be in every library, and every expert in classical function theory should be familiar with this material. The author has performed a distinct service by making this material so conveniently accessible in a single book." — *Mathematical Review*

Since its initial publication in 1962, Professor Schwerdtfeger's illuminating book has been widely praised for generating a deeper understanding of the geometrical theory of analytic functions as well as of the connections between different branches of geometry. Its focus lies in the intersection of geometry, analysis, and algebra, with the exposition generally taking place on a moderately advanced level. Much emphasis, however, has been given to the careful exposition of details and to the development of an adequate algebraic technique.

In three broad chapters, the author clearly and elegantly approaches his subject. The first chapter, Analytic Geometry of Circles, treats such topics as representation of circles by Hermitian matrices, inversion, stereographic projection, and the cross ratio. The second chapter considers in depth the Moebius transformation: its elementary properties, real one-dimensional projectivities, similarity and classification of various kinds, anti-homographies, iteration, and geometrical characterization. The final chapter, Two-Dimensional Non-Euclidean Geometries, discusses subgroups of Moebius transformations, the geometry of a transformation group, hyperbolic geometry, and spherical and elliptic geometry. For this Dover edition, Professor Schwerdtfeger has added four new appendices and a supplementary bibliography.

Advanced undergraduates who possess a working knowledge of the algebra of complex numbers and of the elements of analytical geometry and linear algebra will greatly profit from reading this book. It will also prove a stimulating and thought-provoking book to mathematics professors and teachers.

From reader reviews:

Lewis Wood:

Inside other case, little persons like to read book Geometry of Complex Numbers (Dover Books on Mathematics). You can choose the best book if you love reading a book. As long as we know about how is important any book Geometry of Complex Numbers (Dover Books on Mathematics). You can add know-how and of course you can around the world by way of a book. Absolutely right, since from book you can recognize everything! From your country until finally foreign or abroad you will be known. About simple issue until wonderful thing you may know that. In this era, we could open a book or perhaps searching by internet unit. It is called e-book. You may use it when you feel uninterested to go to the library. Let's learn.

Then we consult again, what kind of activity are there when the spare time coming to an individual of course your answer can unlimited right. Then do you try this one, reading books. It can be your alternative inside spending your spare time, the book you have read is definitely Geometry of Complex Numbers (Dover Books on Mathematics).

Earl Martinez:

The book untitled Geometry of Complex Numbers (Dover Books on Mathematics) contain a lot of information on it. The writer explains your ex idea with easy way. The language is very straightforward all the people, so do not really worry, you can easy to read the item. The book was compiled by famous author. The author brings you in the new period of literary works. You can read this book because you can read on your smart phone, or gadget, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can open up their official web-site and order it. Have a nice study.

Virginia Higgins:

This Geometry of Complex Numbers (Dover Books on Mathematics) is completely new way for you who has intense curiosity to look for some information since it relief your hunger of information. Getting deeper you into it getting knowledge more you know or perhaps you who still having bit of digest in reading this Geometry of Complex Numbers (Dover Books on Mathematics) can be the light food for you personally because the information inside this kind of book is easy to get through anyone. These books produce itself in the form which can be reachable by anyone, yeah I mean in the e-book web form. People who think that in guide form make them feel tired even dizzy this reserve is the answer. So there is absolutely no in reading a book especially this one. You can find actually looking for. It should be here for you actually. So , don't miss it! Just read this e-book kind for your better life in addition to knowledge.
