Financial Modelling - Theory, Implementation and Practice is a unique combination of quantitative techniques, the application to financial problems and programming using Matlab. The book enables the reader to model, design and implement a wide range of financial models for derivatives pricing and asset allocation, providing practitioners with complete financial modelling workflow, from model choice, deriving prices and Greeks using (semi-) analytic and simulation techniques, and calibration even for exotic options.

The book is split into three parts. The first part considers financial markets in general and looks at the complex models needed to handle observed structures, reviewing models based on diffusions including stochastic-local volatility models and (pure) jump processes. It shows the possible risk neutral densities, implied volatility surfaces, option pricing and typical paths for a variety of models including SABR, Heston, Bates, Bates-Hull-White, Displaced-Heston, or stochastic volatility versions of Variance Gamma, respectively Normal Inverse Gaussian models and finally, multi-dimensional models. The stochastic-local-volatility Libor market model with time-dependent parameters is considered and as an application how to price and risk-manage CMS spread products is demonstrated.

The second part of the book deals with numerical methods which enables the reader to use the models of the first part for pricing and risk management, covering methods based on direct integration and Fourier transforms, and detailing the implementation of the COS, CONV, Carr-Madan method or Fourier-Space-Time Stepping. This is applied to pricing of European, Bermudan and exotic options as well as the calculation of the Greeks. The Monte Carlo simulation technique is outlined and bridge sampling is discussed in a Gaussian setting and for Lévy processes. Computation of Greeks is covered using likelihood ratio methods and adjoint techniques. A chapter on state-of-the-art optimization algorithms rounds up the toolkit for applying advanced mathematical models to financial problems and the last chapter in this section of the book also serves as an introduction to model risk.

The third part is devoted to the usage of Matlab, introducing the software package by describing the basic functions applied for financial engineering. The programming is approached from an object-oriented perspective with examples to propose a framework for calibration, hedging and the adjoint method for calculating Greeks in a Libor Market model.

From reader reviews:

Kathryn Cannon:

The reserve untitled Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) is the e-book that recommended to you to learn. You can see the quality of the guide content that will be shown to an individual. The language that publisher use to explained their way of doing something is easily to understand. The copy writer was did a lot of study when write the book, therefore the information that they share to you personally is absolutely accurate. You also will get the e-book of Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) from the publisher to make you far more enjoy free time.

Jaime Worm:

You could spend your free time you just read this book this publication. This Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) is simple to bring you can read it in the park your car, in the beach, train and soon. If you did not include much space to bring often the printed book, you can buy typically the e-book. It is make you better to read it. You can save the book in your smart phone. And so there are a lot of benefits that you will get when one buys this book.

Jack Harbin:

As we know that book is vital thing to add our understanding for everything. By a reserve we can know everything we really wish for. A book is a range of written, printed, illustrated as well as blank sheet. Every year had been exactly added. This guide Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) was filled about science. Spend your extra time to add your knowledge about your technology competence. Some people has several feel when they reading a new book. If you know how big advantage of a book, you can really feel enjoy to read a publication. In the modern era like now, many ways to get book you wanted.

Sean Martinez:

Some people said that they feel weary when they reading a guide. They are directly felt that when they get a half portions of the book. You can choose the particular book Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) to make your current reading is interesting. Your personal skill of reading skill is developing when you like reading. Try to choose basic book to make you enjoy to see it and mingle the idea about book and examining especially. It is to be very first opinion for you to like to open up a book and go through it. Beside that the guide Financial Modelling: Theory, Implementation and Practice with MATLAB Source (The Wiley Finance Series) can to be a newly purchased friend when you're truly feel alone and confuse in what must you're doing of their time.
