P. K. Basu

Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) P. K. Basu

At the heart of much current technology, including fiber-optic communications, optoelectronic devices outperform those based on conventional semiconductors and are likely to be essential in future computers. This book provides a basic understanding of the physical phenomena involved and is ideal for graduate students and engineers interested in designing new materials, devices and applications in optoelectronics. The book gives simple quantum mechanical explanations of important optical processes; it describes band-to-band, intersubband and excitonic absorption and recombination in bulk, quantum wells, wires, dots, superlattices and strained layers including electro-optic effects. It also covers the necessary background material in the classical theory of absorption, quantization of radiation, and band picture based on k-p perturbation. Prerequisites for the book are a knowledge of quantum mechanics and solid state theory. Each chapter concludes with a set of problems, some of which guide the reader to processes not covered in the text. Because it employs a simple one-electron theory throughout, the book is also accessible to advanced undergraduates in physics and engineering.

From reader reviews:

Phyllis Callahan:

Why? Because this Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) is an unordinary book that the inside of the reserve waiting for you to snap the item but latter it will zap you with the secret that inside. Reading this book alongside it was fantastic author who have write the book in such awesome way makes the content within easier to understand, entertaining technique but still convey the meaning entirely. So , it is good for you because of not hesitating having this any longer or you going to regret it. This phenomenal book will give you a lot of benefits than the other book have got such as help improving your expertise and your critical thinking technique. So , still want to postpone having that book? If I had been you I will go to the book store hurriedly.

Sylvester Wedding:

Are you kind of active person, only have 10 or 15 minute in your day time to upgrading your mind proficiency or thinking skill even analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your short space of time to read it because this time you only find reserve that need more time to be go through. Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) can be your answer because it can be read by anyone who have those short time problems.

James Shipp:

In this era globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of references to get information example: internet, newspapers, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. The particular book that recommended to you personally is Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) this publication consist a lot of the information of the condition of this world now. This specific book was represented so why is the world has grown up. The terminology styles that writer value to explain it is easy to understand. Typically the writer made some exploration when he makes this book. Here is why this book ideal all of you.

Jillian Harrington:

That book can make you to feel relax. This kind of book Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) was bright colored and of course has pictures around. As we know that book Theory of Optical Processes in Semiconductors: Bulk and Microstructures (Series on Semiconductor Science and Technology) has many kinds or type. Start from kids until young adults. For example Naruto or Private eye Conan you can read and believe that you are the

character on there. So , not at all of book are usually make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for you personally and try to like reading which.
